**In the Claims:**

Claims 1-27 (canceled)

---

Claim 28 (new): A method comprising:

one of a parsing and generating an internet search engine request to search internet content from one or more identifiers;

performing an internet content search in accordance with said internet search engine request;

retrieving at least one search result from said internet content search;

one of a parsing and generating at least one domain name from the one or more identifiers; and,

determining whether said at least one domain name is available for registration either one of a before, during, and after presenting said at least one search result from said internet content search.

Claim 29 (new): The method, as set forth in claim 28, wherein said at least one domain name is one of a valid domain name and fictitious domain name.

Claim 30 (new): The method, as set forth in claim 28, further including providing a registration form for all domain names that are determined available for registration and providing registrant information for all domain names that are determined not available for registration.

Claim 31 (new): The method, as set forth in claim 30, further including which domain name registration provider of a plurality of domain name registration providers will provide said registration form.

Claim 32 (new): The method, as set forth in claim 31, wherein said determining which domain name registration provider of a plurality of domain name registration providers will provide said registration form includes retrieving said domain name registration provider from one of a template and user modifiable configuration settings.

Claim 33 (new): The method, as set forth in claim 32, further including accessing said template from an autosearch.

Claim 34 (new): The method, as set forth in claim 28, further including generating at least one

hyperlink having a uniform resource identifier (URI) from said at least one domain name and presenting said at least one hyperlink with said at least one search result from said internet content search.

B/ Claim 35 (new): The method, as set forth in claim 34, wherein each said hyperlink is capable of accessing additional information relating to one of an URI and domain name wherein said additional information is selected from a group including WHOIS information, <META> tag information, geographical location information, page source information, domain name after market status information, sitemap information when said URI does not correspond to said sitemap information, and homepage information when said URI does not correspond to said homepage information.

Claim 36 (new): The method, as set forth in claim 28, further including inputting the one or more identifiers from a user interface element.

Claim 37 (new): The method, as set forth in claim 36, wherein said inputting the one or more identifiers from a user interface element includes inputting the one or more identifiers into one of a browser location field, text box, command line, and speech to text interface.

Claim 38 (new): A method comprising:

- one of a parsing and generating at least one domain name from one or more identifiers;
- performing a domain name availability request having said at least one domain name;
- retrieving at least one result from said domain name availability request;
- generating a internet search engine request to search internet content, said internet search engine request including the one or more identifiers; and,
- determining whether to perform an internet content search in accordance with said internet search engine request either one of a before, during, and after presenting said at least one retrieved result from said domain name availability request.

Claim 39 (new): The method, as set forth in claim 38, wherein said at least one domain name is one of a valid domain name and fictitious domain name.

Claim 40 (new): The method, as set forth in claim 38, further including providing a registration form

for all domain names that are determined available for registration and providing registrant information for all domain names that are determined not available for registration.

Claim 41 (new): The method, as set forth in claim 40, further including which domain name registration provider of a plurality of domain name registration providers will provide said registration form.

B/ Claim 42 (new): The method, as set forth in claim 38, further including retrieving at least one search result from said internet content search, generating at least one hyperlink having a uniform resource identifier (URI) corresponding to each said search result from said internet content search, and presenting said at least one hyperlink with said at least one result from said domain name availability request.

Claim 43 (new): The method, as set forth in claim 42, wherein each said hyperlink is capable of accessing additional information relating to one of an URI and domain name wherein said additional information is selected from a group including WHOIS information, <META> tag information, geographical location information, page source information, domain name after market status information, sitemap information when said URI does not correspond to said sitemap information, and homepage information when said URI does not correspond to said homepage information.

Claim 44 (new): A method for presenting enhanced search results from a request to search internet content comprising:

retrieving at least one search result from said request to search said internet content wherein each said search result includes an uniform resource identifier (URI) having a domain name corresponding to said internet content;

generating at least one hyperlink corresponding to each said URI having said domain name, each said hyperlink capable of accessing additional information relating to one of an URI and domain name wherein said additional information is selected from a group including WHOIS information, <META> tag information, geographical location information, page source information, domain name after market status information, sitemap information when said URI does not correspond to said sitemap information, and homepage information when said URI does not correspond to said homepage information;

generating said enhanced search results by combining each said search result having said URI with each said hyperlink corresponding to each said URI; and,  
presenting said enhanced search results.

B/ Claim 45 (new): The method, as set forth in claim 44, wherein said domain name is one of a valid domain name and fictitious domain name.

Claim 46 (new): The method, as set forth in claim 44, further including inputting one or more identifiers from a user interface element, wherein the one or more identifiers are used as part of said request to search internet content

Claim 47 (new): The method, as set forth in claim 46, wherein said inputting the one or more identifiers from said user interface element includes inputting the one or more identifiers into one of a browser location field, text box, command line, and speech to text interface.
